### Familiar w/ Agile?

**How familiar are you with Agile?**

- **Very** ("I have worked in an Agile shop"). 10.81% (4)
- **Somewhat** ("I have taken some training, attended some presentations, etc. on Agile"). 48.65% (18)
- **Not very** ("I've heard some things about Agile"). 29.73% (11)
- **Not at all** ("I have only heard of Agile"). 10.81% (4)
- **Who cares?** ("I'm looking for fodder to counter those arrogant "Agilistas"). 0% (0)

### Hope to get?

**What do you hope to get from this discussion?**

- **A better understanding of Agile values/principles.** 2.70% (1)
- **How agile values and principles can be applied to IT project management.** 59.46% (22)
- **Techniques for implementing Agile into my organizations.** 37.84% (14)
- **Validation that Agile is just a trend and useless.** 0% (0)
How do you prioritize the overall work? Have to imagine many resources would be on cross projects.

How do you manage and plan human resources (especially when they are limited and you need them for the next project)?

What influences made you go this method? Was there a model you followed?
How did you start introducing the model? How did staff react?

How do you determine when you are "done" if the requirements are gathered as you go? In other words, how would you know you have "scope creep" and/or how do you limit it?

Can your users keep asking for more and more changes/features/enhancements without any kind of end in sight or due date?
